

## Making E-Government Easy

SymSoft Solutions is a leading Web Design, Development and System Integration Company devoted to bridging the gap between the potential of technology and power of people. We consistently deliver quality solutions for our customers through our technical expertise and experience, problem solving skills and through our commitment to customer delight.

We specialize in using state of the art web technologies to increase efficiencies and cost-effectiveness for our government and business clients. With web becoming the preferred medium of communication and service delivery, we collaborate with state and local governments to address their most pressing technical and organizational challenges in web-enabling their information and services.

One of our projects, “WebTools” for the California eServices office, won the “Best of California” award for “Best Application Serving Multiple Jurisdictions” in 2007.

SymSoft Solutions is a Registered Small Business and a CMAS Approved Contractor for providing IT Services in the state of California.

## Our Approach

We believe that a technology solution is successful only when it is seamlessly integrated in the organization's business process, achieves the business objectives, and is easy to use by the people in the organization and end users. Hence our approach to solving business problems involves bringing together the right technologies, right processes and the right people.

## Collaboration & Integrity are our key values

We understand government. We are experts in technology. And we are committed to utilize this understanding to improve the business for our customers. Our services and solutions allow agencies to reduce workload, increase efficiency and provide citizens and businesses with easier, more convenient access to government services.
